**VARIANT** *telescopic*

---

**VARIANT** – the intelligent and flexible sliding door system. Now available with telescopic sliding function!

# Sliding door system VARIANT *telescopic*

VARIANT is the intelligent and flexible sliding door system that can be adapted to almost all openings due to its numerous functions.

The possibilities range from standard sliding panels with different fitting styles, to softStop function and dual drive to a coupler kit option for several panels.

By adding a toothed V-belt to our well-established VARIANT system, the panels are now gliding in one smooth and synchronized motion within the opening.

No matter if regarding height, shape or surface: there are almost no limits to your visions.

A great variety of floor guides is also available to meet all demands.

## VARIANT *telescopic*
